

## Tough Computers for Tough Conditions

**Which keyboard would you buy?**

Each of these keyboards was cleaned in a Magna-Clave Model MC autoclave, set at a temperature of 120° Celcius and a pressure of 15 psi for 20 minutes. APC Technology's range of iKey keyboards, featuring industrial silicone rubber keypads in ABS polycarbonate cases, did not melt and distort like competitor products. While we won't claim that our keyboards are autoclave safe, we will claim that they are built with the best quality materials and provide the best performance. The photos below tell the story.
