

Tough Computers for Tough Conditions

APC Technology solution utilised in Airservices Australia Fire Command and Control System

APC TECHNOLOGY announces the successful design and supply of a customised rugged hardware platform for **C4i**. This hardware is to be utilised as part of a nationwide fire control centre system by Airservices Australia – the initial system has been accepted and commenced operation at Coolangatta Airport, Queensland, Australia. C4i believes this system is a world first in nationally networking airport Fire Control Centre Command and Control systems.

APC TECHNOLOGY was able to offer an optimised hardware solution fully customised to exact requirements to provide a base solution to the system.

Forming part of the operators work station **APC TECHNOLOGY** has developed a 19" Stand Alone Panel PC with Integrated Touch Screen and enhanced display technology, combined with the latest generation computing platform and customised I/O control. This has ensured that the hardware platform is fit for purpose and provides optimum performance in this critical application

A short news clip showing the equipment provided can be accessed at <http://www.c4i.com/docs/news/asacip.asf>

About APC Technology

Since 1984 **APC Technology** has become a proven supplier of specialist computer systems and peripherals as used for applications in some of the most severe environments on earth.

APC Technology designs and manufactures state of the art computer/control technology packages for industrial and military clients who have critical applications where failure is not an option.

“We continually liaise with the customer at all stages to ensure that performance requirements are met and that any solution provided by APC remains relevant”

APC Technology Industry Associations

[About Us](#)
